DECISION MAP

Map your decisions and their level of autonomy

LEVEL	Foundation
DURATION	2h - 4h
USE	Mapping
TRACK	Step 2 / 6

OBJECTIVE

Map your key decisions and set, for each one, the **level of autonomy** you delegate to the agent. This is the bridge between the sovereignty diagnostic (**ACF-01**) and the criticality analysis (**ACF-03**).

1 THE AGENTIC MATURITY SCALE

Before mapping, establish a shared vocabulary. First, position the maturity targeted for your agent: most organizations aim for level 2. Delegated autonomy is then set decision by decision (section 3).

0
Classical automation
Fixed rules, no autonomy of judgment. A script, not an agent.

1
Assisted agents
The agent proposes, the human systematically decides. Decision support.

2
Governed agents
The agent acts within a defined framework, under active supervision.

TARGET FOR ~80% OF CASES

3
Supervised autonomy
The agent decides alone; the human checks after the fact and keeps the kill switch.

2 YOUR KEY DECISIONS

Identify the **three decisions** you plan to entrust: fully or in part: to an agent. Describe them before assessing their criticality.

A DECISION A

DECISION MAP

Map your decisions and their level of autonomy

LEVEL	Foundation
DURATION	2h - 4h
USE	Mapping
TRACK	Step 2 / 6

3 DETAILED MAPPING

For each decision, record its criticality (calculated in **ACF-03**), the delegated autonomy level (suggestive · co-decision · supervised autonomous · autonomous) and the safeguards that make this level acceptable.

DECISION	CRITICALITY (ACF-03)	DELEGATED AUTONOMY	SAFEGUARDS & CONDITIONS	OWNER
A				
B				
C				

4 THREE ACTIONS TO LAUNCH

#	ACTION TO LAUNCH	RELATED DECISION	DEADLINE
1			
2			
3			

Next step: assess the criticality of each decision with **ACF-03 · Criticality Matrix**, then set the rules of each agent in **ACF-04 · Agentic Constitution**. A well-mapped decision is a decision already half-governed.
